

[S7100 SPD SC8810 6820.rar](#)

The screenshot displays the Samsung Tool v.18.6 interface. On the left, the 'Phone and Port' section shows the phone model as SM-G900T1, the port as COM7 USB Serial Port (highlighted with a red box and a '1'), and the speed as 115200. Below this is a 'Files' section with input fields for PIT, BOOT, PDA, PHONE, CSC, and UMS. The 'Log' section shows a series of successful operations: 'Bypass MSL... OK', 'Checking for compatible phone and cert... OK', 'Writing CERT... OK', 'Checking CERT status... OK', 'Rebooting phone... OK', and 'Done with Samsung Tool v.18.6'. Two blue arrows point from the log to the 'Wipe EFS' button in the 'Unlock options' section (highlighted with a red box and a '2') and the 'Write Cert' button in the 'Repair options' section (highlighted with a red box and a '3'). A large red watermark in the center reads 'Samsung SM-G900T1 Unlock Done By Gsm_Babu'. The bottom of the interface shows a progress bar at 100% and fields for 'Card: A' and 'Status'.
